

Does your pet ever suffer from diarrhoea or vomiting?

Gastrointestinal disease, of short or long duration, is one of the most commonly seen conditions in Veterinary Surgeries worldwide, accounting for between 20% and 25% of veterinary visits. Nutritional support often forms an essential part of the treatment. It has a profound effect on the recovery of the intestine, but is commonly ignored, resulting in a delayed recovery.

Eukanuba Veterinary Diets Intestinal Formula allows you to have the versatility and ease of providing your pet with a tasty diet that he or she will love. It contains beneficial nutrients, which can facilitate a speedy and uneventful recovery. It can be fed short term, to help your dog or cat's intestine return to normal following a sudden intestinal upset, or as a lifelong complete diet for those pets that require continuous gastrointestinal support.

Get the right support

This exceptional formula provides all of the essential, highly digestible ingredients found in the entire range of Eukanuba diets, as well as the benefits of:

- ▶ Three special fibre sources, which help fight the bad bacteria, enhance beneficial bacteria and promote a healthy intestinal environment
- ▶ Highly digestible ingredients to ensure that all nutrients are absorbed by your pet's body
- ▶ Lowered fat levels (for dogs) to reduce the risk of diarrhoea
- ▶ Omega fatty acids which help reduce inflammation of the intestine

An expert opinion - Dr Sarah Miller of Iams South Africa

"Eukanuba Intestinal Formula for Puppies is the ONLY diet available that is specifically designed for puppies with those all too commonly occurring gastrointestinal upsets. It provides all of the nutrition required to promote a healthy gut as well as everything needed to assist the development of your growing puppy."

Ask your vet for advice and information on the Eukanuba Intestinal Formula diets for your pet.
